Services Offered by Environmental Health and Safety

Environmental Health and Safety Roles in Emergency Management on Campus

Staff from Environmental Health and Safety are available upon request to help departments in the following areas of emergency management on campus:

Services Available for Department

1. Training – Develop and deliver department-specific or building-specific training on various emergencies.
2. Hazard Vulnerability Analysis – Assist departments in conducting a hazard vulnerability analysis. This review determined the probability of a disaster, its impact on the department or building and the level of preparedness. The outcome of this review will help prioritize emergency preparedness efforts.
3. Written Procedures – EHS has developed simple templates that can be used by departments to create written procedures for various emergencies.
4. Exercises – EHS can develop, execute and evaluate emergency management exercises (previously known as disaster drills) for buildings or departments. This includes fire drills, tornado exercises, bomb threats and more.
5. Chemical Spill Management – Select individuals in EHS are available 24/7 to provide spill cleanup on campus.
6. Incident Response Team – Mark Smith serves as the safety officer for the campus emergency management team.
