Online Training Now Available - We are proud to offer EPA Accredited Lead-Safe Work Practices training online, which can take the place of the 6 hour classroom instruction for the Lead RRP certification. Please note that a two hour hands-on training session is still required before you can obtain certification.

Your cost for online training is just $195.

Once you have completed the online training you will receive an email with instructions for registering for an upcoming – and required – 2-hour “hands-on” training session, which will take place at UT Knoxville. Once you complete the hands-on portion, you will take an exam. If you pass the exam, you will receive a certificate in the mail, and you will be registered with the EPA as a Certified Renovator.

For more information on the e-learning option, or to schedule a hands-on training session, please contact April Case at 865-974-5084 or acase3@utk.edu.

You can also click on the LeadSafeOnline training link to get started. Make sure to enter the Trainer Code UTNA3 when you register.
