# VENTILATION PLAN FOR AN ENCLOSED PIG NURSERY

**Schematic Ventilation Plan**

**Wiring Diagram**

**Notes:**
1. Adequate and proper ventilation is essential for the successful operation of enclosed nursery buildings.
2. Select a complete ventilation system before starting construction so the necessary structural provisions for installing the system can be made. This plan shows one system; other commercial systems are available.
4. Mention of a trade name is for comparison purposes only. The Agricultural Extension Service does not endorse the mentioned products or disapprove of similar products not mentioned.
5. Warmer climates may require an evaporative cooler on the fresh air inlet to provide satisfactory temperature control during hot weather.
6. Fans "A", "B", "B", and "C" are exhaust type with gravity shutters.
