## New Brand

here

# We create experiences for consumers and business

# Our Connected Driving mission

At HERE we strive to make driving **smarter, safer and more enjoyable** by delivering best-in-class Connected Services & Driver Experiences.

Maps for Life

# HERE creates the most true-to-life index of the world...

# HERE : the world's first location cloud company

(a NOKIA business)

HERE makes the world's freshest and most accurate maps.

We power products and services across automotive, web, mobile and enterprise.

# Results: robust mobility, safety, and eco-efficiency apps

## Driver Information

Curve Speed Warning  
Speed Limit Advisor  
Driver Alerts

## Active Safety

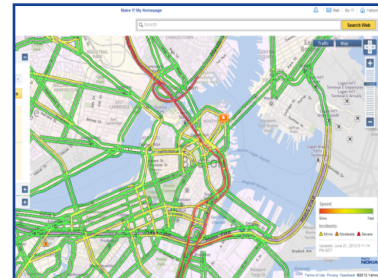

Adaptive Cruise Control  
Adaptive Frontlights  
Collision Avoidance  
Lane Keeping

## Powertrain Efficiency

Hybrid Powertrain Control  
Transmission Control  
Predictive Cruise Control

## Traffic Management

Consumer Information  
Operations  
Planning  
Performance Measurement

HERE Maps and Real-Time Data are combined in different ways  
to serve different needs

# Delivering distinct end user benefits across all segments

HERE powers 4 out of 5 vehicle with navigation maps and traffic

## Consumer

# Major Platforms use HERE Traffic

HERE Platform powers map platforms of major sites like Amazon, Bing & Yahoo who use HERE Traffic.

HERE platform is serving ~100 million HERE Traffic requests per day!

# Powering automated vehicle technology today

Nov 2013

HERE has teamed up with Mercedes Benz to jointly develop smart maps for connected cars and ultimately, self driving cars.

Jan 2014

North American Auto Show 2014: Continental and HERE team up to map out the future of vehicle connectivity

**Joint development for next generation Electronic Horizon, Automated Driving and new Intelligent Transportation Systems based on high precision map technology**

# Map Products

# HERE Map – Multi-modal and Dynamic

1. Search for Locations and Address content
2. Route by vehicle type (car, truck, transit/pedestrian)
3. Process and deliver dynamic content (traffic, weather, etc)

# Collaborative solutions powering transportation for government

# Traffic Products

# Traffic Fast Facts

- 7-day, 24 hours availability
- Coverage: 100% interstate highways and primary arterials
- 100% major traffic signal controlled roads in 134 markets
- 360,000 → 1,000,000 miles in US and Canada in 2014
- Providing traffic data to Michigan, Florida, Pennsylvania Turnpike, Missouri, New York, New Jersey and Connecticut
- Selected by FHWA to create new archived data product for performance measurement activities
- Top 20 JD Powers ranked navigation systems all use HERE maps and Traffic

# Traffic Product Portfolio

## Use Case

Provide the public reliable travel times in real-time (DMS, apps)

Operations & Planning Groups need to understand patterns over time and different conditions to optimize performance

The public, operations, and planning groups can benefit from anticipating

## Today's Products

Real-time

Real-time Feed  
Speeds, travel times, incidents

Archived

# Halo: Real-Time Data Processing Engine

# Traffic Input Sources

The great & unique fundaments for premium products

## Growing Probe Volume

- Over 100% growth expected in 2014
- Major provider currently being implemented

## 160+ GPS Probe Sources:

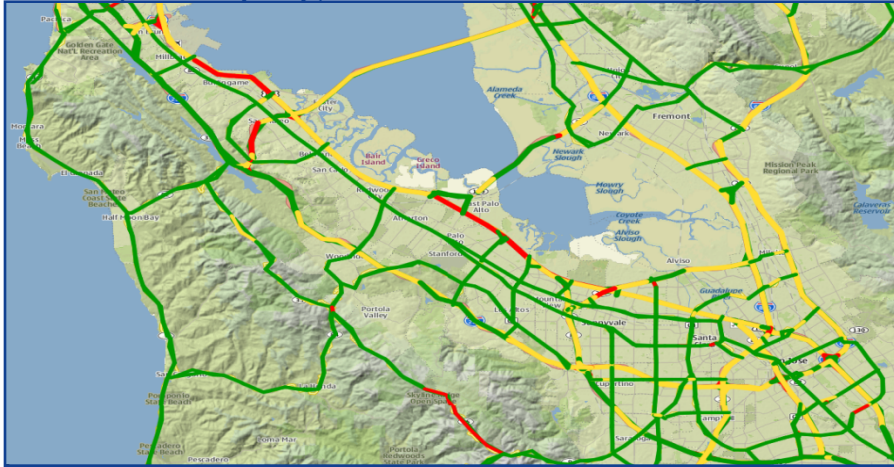

- Connected cars
- Smart phone apps: navigation apps
- Sat navs / PND's
- Fleet management systems
- Tracking systems
- Road sensors

## ~30 Incident sources:

- National / regional traffic centers
- HERE owned traffic centers (USA, Germany, New Zealand & Australia)
- Road works data providers

# HERE Traffic in North America

- ~100% coverage on Controlled Access roads nationwide, 24 x 7 (FC1-FC2 roads/Major Highways)
- ~100% coverage of primary arterials & major stop lighted roads in the top 134

San Francisco Bay Area

New York City

Ramps/Connectors  
near SFO

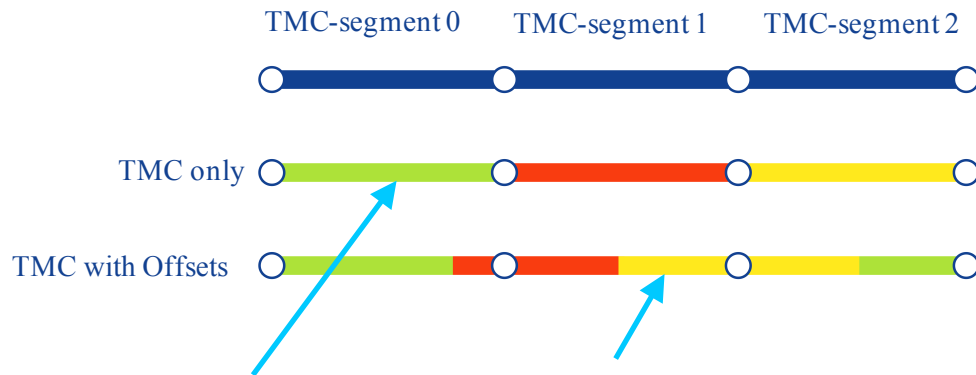

San Francisco

# New Features: TMC-Offsets

## Flow reporting on TMC-road segments example

Without offsets, TMC-based traffic reports average conditions from the beginning to the end of a TMC.

TMC-Offsets add precision to traffic reports by specifying the offsets at which congestion begins and ends.

TMC-Offsets brings more granular traffic information on TMC-road segments.

# New Features: DLR— Dynamic Location Referencing

## TMC vs Link Example

TMC-road segments in Paris

TMC + Link road Segments in Paris

DLR enables traffic reporting on the entire map

Traffic Information reporting on the entire map, at link level.

Allows Traffic to be reported anywhere we can map match a PGS probe point, not just where there are TMC codes.

Traffic where you need it, when you need it.

# Incident management center

We collect our own flow & incident data via our incident management center- a hybrid approach of humans and automation.

1. Operators monitor a variety of sources, including: emergency centers, users, Twitter and police.
2. Incidents are then corroborated via flow data from sensor network, traffic sensors, and incident source partners.
3. Incidents are entered in HERE's proprietary processing engine and broadcast instantly, filtering out non-essential or incorrect reports

# HERE Historic Traffic

A typical day of average speed values derived from billions of multi-year speed observations

Provides the foundation for optimization of routes and accurate drive time estimates

# HERE Traffic Patterns – Product Content

- Available for each 15 minutes of the week:
  - Speed average
- The 15 minute week information is available based on:
  - 3 year probe data observations for **all roads**
- Covers **all roads**

- Data characteristics:
  - Relational csv format for 15-minute data intervals
  - **Annual** model by weekday
  - A Holiday/Seasonal Factors are included, providing guidance for those unusual traffic days
  - **ALL ROADS:** Referenced to TMC codes or Link IDs
  - Referenced to local time
  - Speed values in MPH to 1 MPH increments

# HERE Traffic Patterns – Link-based Coverage

- Provides coverage on all roads in the Map – not just roads that are TMC-coded. This is possible because the data is geo-referenced to Link IDs.
- Allows for detection of traffic conditions that might be aggregated in the TMC-based coverage model
- Greater coverage allows for better routes and more accurate travel times

## TMC-based Coverage

## Link-based Coverage

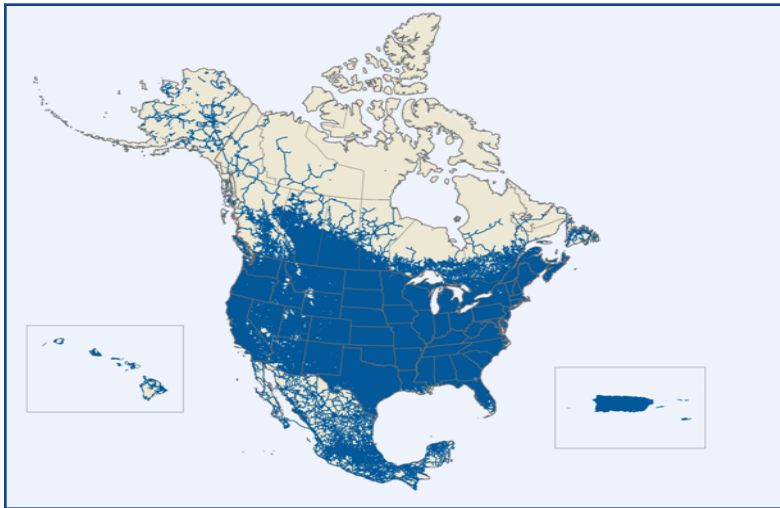

here

# HERE Analytic Traffic – Product Content

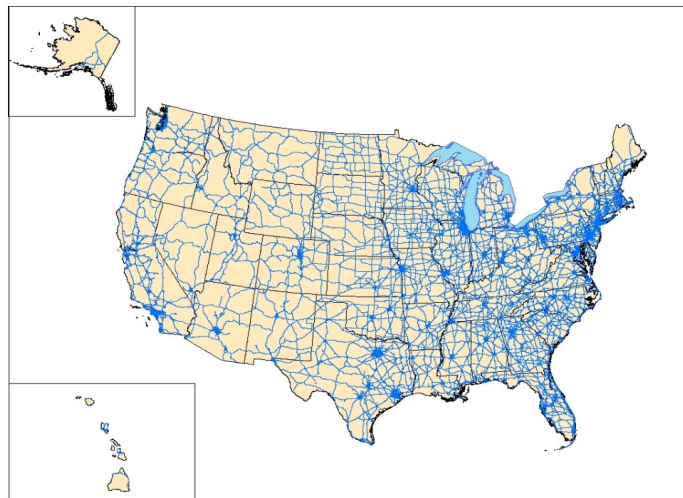

- Available for each 15 minutes of the week:
  - Speed average
- The 15 minute week information is available based on:
  - **1 year** probe data observations, TMC roads
- Data characteristics:
  - Relational csv format for 15-minute data intervals
  - **Monthly** by weekday
  - Referenced to TMC codes
  - Referenced to local time
  - Speed values in MPH to 1 MPH increments

# National Performance Research Data Set

# NPMRDS – What is NPMRDS

HERE provides a National Highway System (NHS) map extract with TMC codes

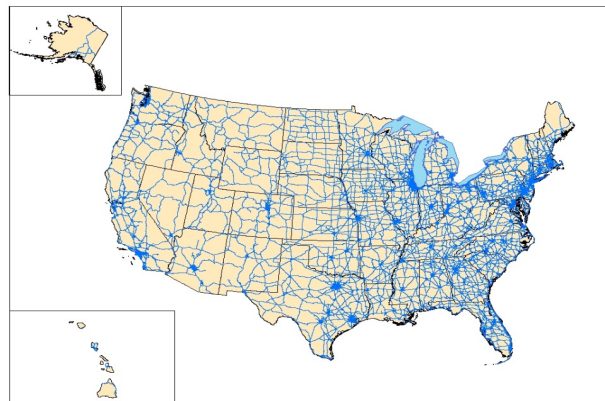

The shapefile will include attributes such as: TMC ID, street name, functional class, direction of travel, controlled access, ramp identifier

# NPMRDS – Background

- Key elements of the RFP:
  - Looking for actual, observed measurements only
    - No estimates, historical data substitution or the like
  - Coverage of the entire National Highway System (NHS) as defined by MAP-21
  - Average travel times every 5 minutes, 24 hours a day, 7 days a week
  - “Historical” data set delivered monthly

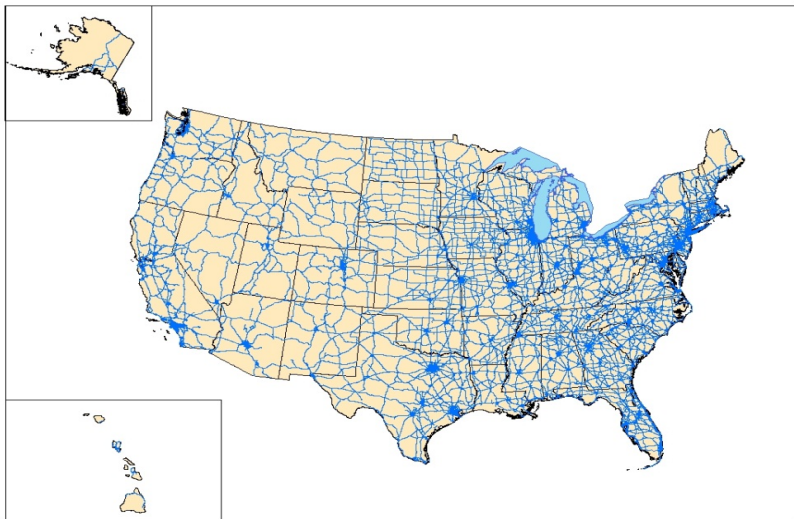

# NPMRDS – What is NPMRDS

- A historical archive of average travel times by calendar day in 5-minute increments covering the National Highway System (NHS)
- An archived dataset is also available for  
October 2011 – June 2013
- Data for July 2013 –  
September 2013 is  
currently available
  - Data set is available on monthly  
basis

# NPMRDS – Product Content

- Available for each 5 minutes increments by day:
  - Travel time for Truck, Passenger and Combined
  - Created monthly
- Data characteristics:
  - **Daily**
  - Relational csv format for 5-minute data intervals
  - Referenced to TMC codes
  - Referenced to local time
  - **Travel-times Only**
  - Data available from 2011 forward

# NPMRDS – Product Background

- FHWA is providing access to the data set (NPMRDS) for state DOTs and MPOs free of charge
- FHWA is not providing:
  - Analysis or GIS tools
  - Additional data
- FHWA will hold quarterly webinars so that users of the NPMRDS have an opportunity to discuss issues with using the data amongst their peers as well as answering NPMRDS-specific technical issues

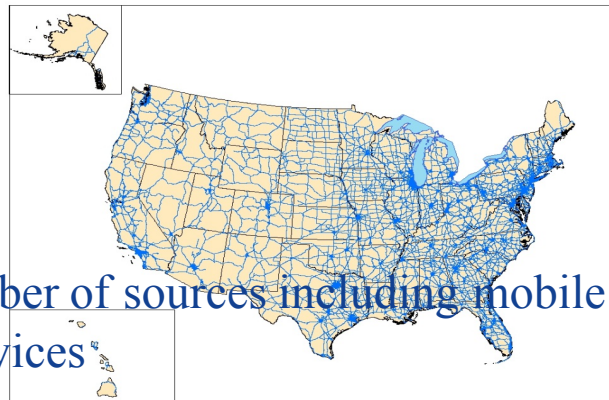

# NPMRDS – What is NPMRDS

- FHWA selected HERE (formerly Nokia/Navteq) to provide the NPMRDS
  - Four one-year options (potential 4 year contract)
- The data set includes three distinct average travel times for each 5 minute “bin”
  - Freight
  - Passenger
  - All Traffic
- HERE Data Sources
  - Passenger probe data is obtained from a number of sources including mobile phones, vehicles, and portable navigation devices
  - Freight probe data is obtained from the American Transportation Research Institute leveraging embedded fleet systems

# NPMRDS – What is NPMRDS

- FHWA selected HERE (formerly Nokia/Navteq) to provide the NPMRDS
  - Four one-year options (potential 4 year contract)
- The data set includes three distinct average travel times for each 5 minute “bin”
  - Freight
  - Passenger
  - All Traffic
- HERE Data Sources
  - Passenger probe data is obtained from a number of sources including mobile phones, vehicles, and portable navigation devices
  - Freight probe data is obtained from the American Transportation Research Institute leveraging embedded fleet systems

# Monthly Dataset Visualization: Example 1 - Rural Interstate

I-5 S outside  
Bakersfield, CA

Length: 6.3939mi

Speed limit: 70  
MPH (TT: 329 s) |

Passenger Free  
Flow: 70.2 MPH

# Monthly Data Set Visualization - Example 2: Urban highway, typical peak pattern

I-85 S in Atlanta, GA

|           | Mean      | Std Dev   |
|-----------|-----------|-----------|
| Passenger | 167.5 sec | 186.1 sec |
| Freight   | 260.2 sec | 238.0 sec |

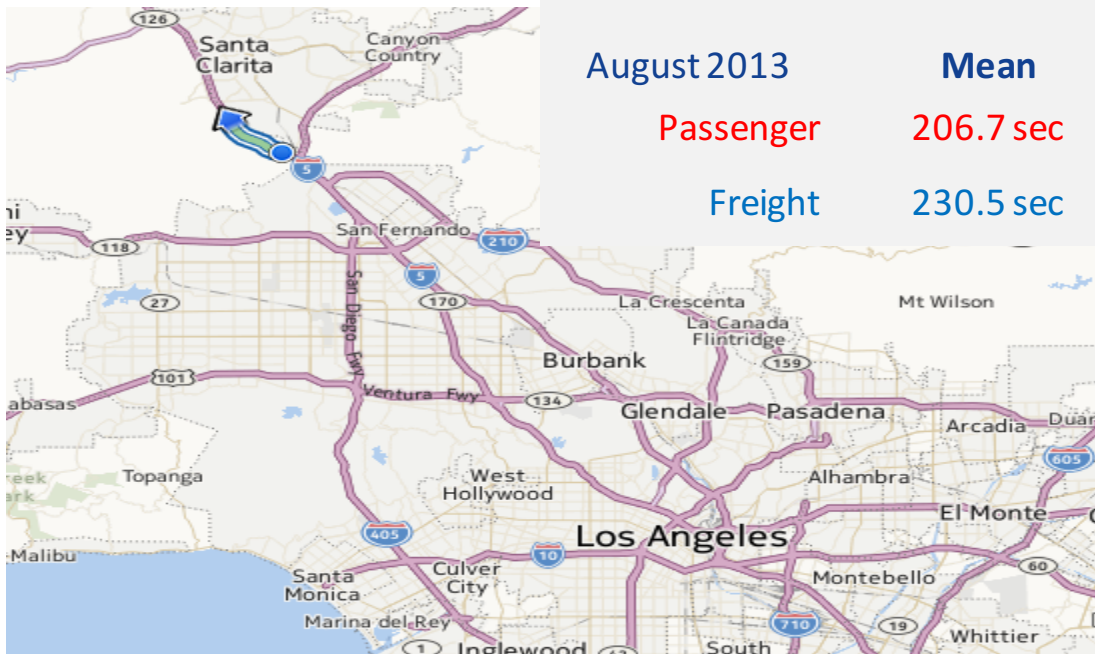

# Monthly Data Set Analyses

## Example: Suburban Interstate

I-5N out of LA

Length: 2.80mi | Speed limit: 65 MPH (TT: 155 s)

August 2013

Passenger

Freight

Mean

206.7 sec

230.5 sec

Standard  
Deviation

251.8 sec

273.6 sec

# Suburban Interstate Travel Time Comparison – Aug 2013

I-5N out of LA

Length: 2.80mi | Speed limit: 65 MPH (TT: 155 s)

# Suburban Interstate Data Density over August

I-5N out of LA

 n Bay - Eau Claire

# NPMRDS – What is NPMRDS

- Travel times will be provided by TMC code
- TMC codes are pre-defined road segments based on the industry standard for traffic reporting
  - TMC-based location referencing simplifies the major road network
  - Allows traffic providers to report varying speeds across different segments of a road

# NPMRDS – What is NPMRDS

## Entire Dataset Includes:

- National Highway System: 486K bi-directional miles
- 50 States, DC and PR
- Crossings into CAN & MEX
- Over half a Billion Travel Time records per month

## State Dataset Sizes:

- Large State: 400MB-1.5GB
- Medium State: 100MB-400MB
- Small State: 0.3MB-100MB

## Download and Manage Data Monthly

# NPMRDS – Licensing

- Who can use it:
  - Any agency that is a State DOT or MPO receiving federal transportation funds and is authorized by FHWA to receive Data.
  - Agencies may grant contractors the right to use data for work performed for the agency, as long as it's used for the outlined purposes.
- Agencies may use the data set:
  - to meet performance management needs related to performance indicators, measures and transportation program management;
  - to disseminate aggregated information to the public consistent with the organizations' transportation planning, programming, management and operations responsibilities as they pertain to performance management activities;
  - in transportation planning and operational analyses, service and data quality validation analyses; and
  - in applications for Agency's internal business.
- Agencies may not:
  - sell or share the vehicle probe data to other public entities which are not part of the above
  - sell or otherwise transfer the vehicle probe data to any private entities for purposes not directly related to activities hereunder.

# Our New Big Data Processing Engine

## Traffic quality

- Link level accuracy
- Better routing with TMC-offsets
- Traffic where and when you need it with DLR

## Growing data volume

- Efficient message handling for faster processing
- Expanded data providers

## Faster delivery

- TML, RDS-TMC, HD, DAB, TPEG
- Faster integration of new data sources

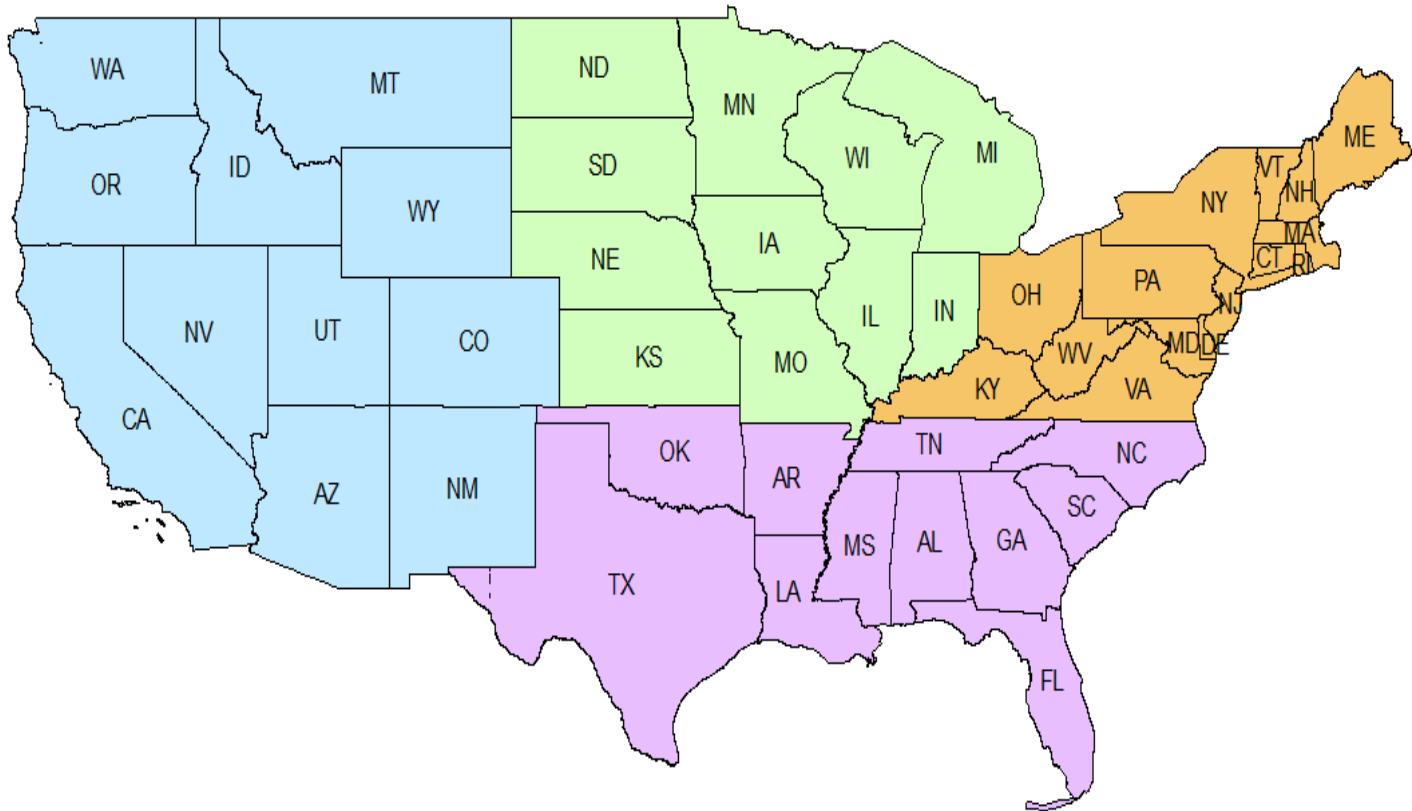

# Traffic Product Portfolio

## Use Case

## Today's Products

|   |            |   |
|---|------------|---|
| Provide the public reliable travel times in real-time (DMS, apps)   | Real-time  | Real-time Feed<br>Speeds, travel times, incidents   |
| Operations & Planning Groups need to understand patterns over time and different conditions to optimize performance | Archived   | National Performance Measurement Research Data Set (Archived travel times)<br><br>Historical Patterns & ATP<br>Typical speeds & travel times by day/time based on historical data |
| The public, operations, and planning groups can benefit from anticipating   | Predictive | Predictive models based on normal state, seasonality  |

# NPMRDS – Delivered in 4 regional files

# NPMRDS File Layout

## TMC Static File

Contains descriptive information about the road segment (TMC code, names, admin info, segment lengths, lat/long)

## Monthly Travel Time Data File

Contains the travel time data for each day for a 1 month timeframe

## Shape File

Contains precise road geometry of the NHS and attributes about the road segment

## TMC Look Up Table

Specifications &  
Documentation
