This is a command under the "Options" menu that allows you to replace one color with another. This option will **ONLY** work with items that have been painted onto the background or CLIPART! Graphic Objects, Text Items, and Buttons cannot be altered with this option.

This is how you do it:

1. Select the area or picture that you want to swap colors on with the lasso or selector tool.

2. If you do not select anything the entire background will be edited.

3. Next, select "Replace Colors..." from the Options menu and click the action that you want (replace or exchange).

4. Select two colors from the palettes, the one to be replaced and the one that will replace it.

5. Clicking "OK" will perform the action.

**Hint:** It is much easier to replace colors with the 16 color palette than the 256 palette.
