To use this NBA, you need to specify:
1. the name of the text item, if you have more than one text item on the same card.
2. the "steps" it will scroll (0 allows it to scroll to the end of the text item).
3. the speed.

You may want to leave the default setting and preview it before making any changes.

To control the smoothness of the scrolling choose one of these options:

**Scroll Lines:** this option will cause the text field to scroll one line at a time.

**Scroll Pixels:** this option will cause the field to scroll on a pixel-by-pixel level instead of line-by-line. This option requires you to specify how many pixels you want the display to move.

**Tips for Use:**
- You must have the text box set to scrolling.
- The text box cannot be Transparent.
- To make the credits scroll completely on and off the screen start and end the contents of the text item with several returns.
